Nature Series

Saturday, June 28th
8:30-10:30pm

Magical Moth Night Discovering Moths of Western Pennsylvania

The purpose of this presentation is to enrich and educate kids and adults about the different types of moths and their caterpillars found in our area.

We will then explore the hidden beauty of our nighttime pollinators by observing moth stations set up around the lake using different types of lights.

Please bring a flashlight and blue light blocking glasses (if you have them). We also recommend that you download the inaturalist app before arriving so that we are able to document our findings.
